<https://www.linkedin.com/in/ruben-eduardogonzaleznova>

I am an Industrial Engineer with 6 years of experience, specializing as a Data Engineer and Spark and PowerBi Analyst. Currently, as a Developer Engineer at Gildan, I have honed my expertise in technologies such as data modeling, ETL, Git, NoSQL, Scala, Hadoop, and BIG DATA, supporting operations in the Dominican Republic. My background includes leading the design of innovative tools in my previous role as a Logistics Analyst and Programmer, contributing to the efficiency of logistic processes. With skills in SQL, Tableau, and C, I am a passionate leader focused on continuous improvement, committed to finding innovative and efficient solutions in the industrial field, constantly exploring new technologies to drive business success through intelligent data analysis and creative application of technology.

EXPERIENCE

SR DEVELOPER ENGINEER,

Gildan Activewear

2023-PRESENTE

My role is to design and create technological solutions that enhance operational efficiency and productivity. I collaborate closely with interdisciplinary teams to understand the specific requirements of the plant, developing custom applications to manage production, control inventory, and track orders. My responsibilities also include maintaining and updating existing systems, ensuring their adaptability to emerging technologies and the evolving needs of the textile plant, with the aim of driving innovation and excellence in production processes.

LOGISTICS ANALYST ENGINEER

Gildan Activewear

2020-2022

My role focused on addressing the needs of different processes by implementing and maintaining the GMLCA module, improving information collection systems, accelerating data flow, and developing a database for logistical transactions in SQL and Access. Additionally, I designed a platform that facilitated communication between import/export area coordinators.

SUPPLY CHAIN LOGISTICS ANALYST AND PROGRAMMER

Gildan Activewear

2019-2020

In this role, I was responsible for conceiving, designing, and developing tools or informative and illustrative content based on an analysis of the organization's requirements and needs. This included creating tools and applications for the automation and acceleration of data analysis processes, as well as designing, structuring, and maintaining the logistics database. I identified needs for the creation of applications according to process requirements and provided support in the implementation of new tools to optimize and improve departmental controls. Additionally, I developed and executed tools for the preparation of Logistics Dashboards and reports, streamlining response times in report generation. Regarding execution and maintenance, I supervised the proper functioning of areas, systems, and processes, contributing to compliance with the company's standards, procedures, and indicators. Moreover, I provided training and supplied data to the logistics team according to their availability and needs.

INVENTORY COUNT CYCLE COORDINATOR

Rockwell Automation

2015-2019

I efficiently led and supervised the periodic inventory counting cycle, ensuring the accuracy and integrity of the data. My role included planning and executing inventory audits, coordinating teams to ensure comprehensive coverage. Additionally, I served as the key person in designing and maintaining inventory indicators, providing accurate and detailed reports to support strategic decision-making. My focus was on continuous improvement of processes, implementing best practices and technologies to optimize inventory management and ensure operational efficiency of the warehouse.

EDUCATION

INDUSTRIAL ENGINEER

- Universidad Autónoma de Santo Domingo

MASTER'S IN APPLIED ARTIFICIAL INTELLIGENCE (In Progress)

- Tecnológico de Monterrey

CERTIFICATES

- IBM Python for Data Science
- LambdaTest Software Testing
- LambdaTest Test Automation
- Google Cloud Computing

SKILLS

- Leadership
- Teamwork
- Analytical Skills
- Project Planning
- Technological Innovation
- Objetivito

TECHNICAL KNOWLEDGE

- Advanced Python for Data Science
- Google Cloud Computing
- Scala
- SQL and NoSQL
- R for Big Data Analysis
- Data Modeling and Structure
- Tableau and Power BI
- Git
- Snowflake
- DataBricks
